1.0 INTRODUCTION

This Interim Removal Action (IRA) Final Report summarizes the remedial activities that were performed at the LCP Chemical Superfund Site in Linden, New Jersey as described in Amendment No.1 to the Work Plan, dated June 19, 2001. This work was performed under the contract URS Corporation (URS) and URS Construction Services has with ISP Environmental Services Inc.

1.1 Site Description

The LCP Chemicals, Inc. Superfund Site is located in an industrial area at the foot of South Wood Avenue in Linden, Union County, New Jersey. The general site vicinity is known as Tremley Point. The site is centered at 40 degrees 36 minutes 29 seconds latitude and 74 degrees 12 minutes 41 seconds longitude on the United States Geological Survey Arthur Kill, N.Y./N.J. quadrangle map (Figure 1-1). The site encompasses about 26 acres and consists of the City of Linden Tax Block 587, Lot 3.01, Lot 3.02, and Lot 3.03.

The site is bounded to the north by the ISP Environmental Services Inc. Site, to the northeast by Northville Industries' bulk petroleum storage area, to the southeast by the Mobil Gas bulk petroleum storage area, and to the south by the British Petroleum bulk petroleum storage area. A small, re-channeled tidal creek, South Branch Creek, flows eastward from the site and drains into the Arthur Kill.

As shown in Figure 1-1, the main Conrail line (Central Railroad of New Jersey) parallels the New Jersey Turnpike. A Conrail Spur (Sound Shore Branch) parallels the shoreline of the Arthur Kill and crosses the site along Avenue B. A set of Conrail spurs, roughly parallel to Tremley Point Road, borders the southern part of the site. The Tremley Point Road spurs and the Sound Shore spur join at the southeast end of the site.

1.2 Site History

The site consists of a former chlorine production plant and ancillary terminal, packaging, and distribution areas. Between 1955 and 1982, the plant manufactured gaseous chlorine using a technology known as the mercury cell electrolysis process. A by-product of this process was wastewater and sludge that contained residual elemental mercury. Beginning in the early 1980s, both the USEPA and the New Jersey Department of Environmental Protection (NJDEP) conducted numerous inspections and limited investigations at the site because of environmental concerns associated with the mercury cell process. The results of their investigations indicated that there were spills at the site and to South Branch Creek, although the magnitude and extent of contamination, if any, were not determined.

In 1985, LCP Chemicals, Inc. stopped their production activities and began to dismantle the facility. In 1995, a Resource Conservation and Recovery Act (RCRA) Facility Investigation Work Plan was prepared for the site (Eder, 1995) to evaluate potential contamination in areas of concern. The Work Plan was approved by the USEPA on January 3, 1995 but it was not implemented because the owner of the site did not have the financial resources for remediation work. In 1996, the USEPA evaluated the site for a Superfund Removal Action, but determined that there were no acute threats to human health and environment and that consequently, a short-term, emergency cleanup was not warranted. The USEPA added the LCP Chemicals, Inc. site, a Division of Hanlin Group, Inc., to the National Priority List (NPL) on July 27, 1998 (which required that a CERCLA RI/FS be conducted for the site). In September 1998, the USEPA identified GAF Chemicals Corporation as one of six potentially responsible parties (PRPs) for the site. The other five PRPs identified by the USEPA were Caleb Brett (USA), Inc., Kuehne Chemical Company, Inc., Praxair, Inc., Union Carbide Corporation, and LCP Chemicals, Inc. (a division of the Hanlin Group, Inc.). ISP Environmental Services Inc., which has assumed the liabilities of GAF Chemicals Corporation for this site, executed a Consent Order with the USEPA on May 31, 1999.

1.3 Site Ownership

The Grasselli Chemical Company began industrial operations in the vicinity of the site around 1885. Before then, the area was undeveloped marshland. In 1924, the company became the Grasselli Dyestuff Company. It was incorporated in 1929 as American I.G. Chemical Corporation, which was owned by the German company I.G. Farbenindustrie, A.G. In 1939, the company changed its name to General Aniline & Film Corporation. In 1942, 98 percent of the company stock was seized by the United States Justice Department as a war asset and the company was operated by the U. S. Government acting as Alien Property Custodian. The chlorine plant was constructed at the site sometime around 1955; the site was generally undeveloped marshland up until that time. In 1965, the U.S. Government sold the stock in a public offering and in 1968, General Aniline & Film Corporation changed its name to GAF Corporation. In 1971, GAF Corporation shut down the chlorine production plant (the site).

In 1972, GAF Corporation (GAF) sold the plant to Linden Chlorine Products, Inc. of Edison, New Jersey. The company was founded by former GAF employees and formed solely for the reopening and operation of the Linden chlorine plant. In 1975, Linden Chlorine Products, Inc. reported that they owned no other facilities and that they produced only three products - chlorine, sodium hydroxide, and hydrogen.

By the early 1980s, as the company acquired additional chlorine production facilities along the U.S. east coast, Linden Chlorine Products, Inc. became LCP Chemicals-New Jersey, Inc., a subsidiary of Linden Chemicals & Plastics, Inc. Between 1987 and 1989, the company name was changed to LCP Chemicals-New Jersey, a division of Hanlin Group, Inc. On July 10, 1991, Hanlin Group, Inc. filed for bankruptcy under Chapter 11 of the United States Bankruptcy Code and sold all of its operating assets before April 1994. In August 1994, the USEPA conducted a site visit and confirmed that the chlorine process buildings were decommissioned, the facility was no longer functional, and that the site was vacated by LCP employees. Active Water Jet, Inc., a pipe cleaning company, who was a tenant at the site since about the early 1990s, remained at the site until late 2000.

1.4 Description of Work

As part of the interim removal action, URS was tasked to remove the following materials from the LCP Chemical site:

- Removal and cleanup of the metallic mercury (Hg) spills on the floor and collection trenches in buildings 230 and 240. This also included the removal and cleanup of other existing waste present inside both buildings.
- Removal and cleanup of approximately 5 pounds of Metallic mercury on a concrete floor slab, outside building 230.
- Removal and cleanup of approximately 100 lbs of mercury contaminated soil in an open top 55-gallon drum, outside building 230.
- Removal of a poorly supported 25,000-gallon tank (saturator) adjacent to building 223.

Figure 1-2 shows the locations of the different IRA cleanup areas. URS subcontracted with a disposal company (Envectra) for the offsite transportation and disposal of all waste covered under this IRA.

2.0 PREPARATION ACTIVITIES

Prior to mobilizing to the site, URS Construction Services prepared Amendment No 1 to the Work Plan (IRA Work Plan dated August 14, 2000) and Amendment No 1 to the Health and Safety Plan (IRA Health and Safety Plan November 7, 2000). They were reviewed and approved by ISP, NJDEP and USEPA in July 2001.

2.1 Interim Removal Action Work Plan

Amendment No 1 to the Work Plan described the history of LCP Chemicals, Inc. and the methods that were to be used to conduct the interim removal action (IRA). Amendment No 1 to the Work Plan was submitted on June 19, 2001 and approved in July 2001.

2.2 Health and Safety

Amendment No 1 to the Health and Safety Plan (HASP) that establishes the procedures to protect site personnel from potential health and safety hazards resulting from the IRA tasks was provided to EPA on June 19, 2001 for review and approval.

All on-site personnel were responsible for complying with the requirements of the HASP. The Project Manager and the Site Superintendent were responsible for implementing the HASP and ensuring that its requirements are enforced. Managers were assisted in this effort by URS health and safety staff. In accordance with OSHA 1910.120 (a)(3), a member of the health and safety staff was present on-site during all hazardous waste removal action tasks.

All personnel performing interim removal actions at the LCP Chemicals project complied with the training requirements outlined in OSHA 29 CFR 1910.120(e) and the URS Health and Safety Program and Management System (HSMS). The Project Manager and Project Health and Safety Officer (PHSO) verified and documented that all URS personnel and subcontractor personnel met the applicable training requirements prior to the start of site work, including:

- OSHA 1910.120 initial 40-hour training
- OSHA annual eight-hour refresher training within the last year
- OSHA eight-hour supervisory training for on-site managers and supervisors
- At least one URS personnel had American Red Cross (or equivalent) first aid and CPR training, and was present onsite at all times

Prior to the start of site work, all personnel assigned to the project attended an initial site-specific safety training, which specifically addressed the activities, procedures, and equipment applicable to the site's operation. Workers filled out a Site Safety and Health Plan Compliance Agreement and a Medical Data Sheet during the training session.

The Site Superintendent / Collateral Health and Safety Officer (CHSO) also presented site safety briefings on a daily basis (i.e., tailgate meetings) to all personnel on-site, before the start of the work shift. The briefings included weather-related information, instructions for new operations to be conducted, and/or safe work practices.

In order to protect site personnel from the hazards associated with site contaminants of concern, a personnel protection and monitoring program was implemented to control potential chemical exposures. MSDS on the contaminants of concern were also supplied.

Health and safety guidelines were successfully implemented throughout the different construction tasks. As a result, there were no loss of time or any incidents to report.

2.3 Quality Control

Major site activities were monitored and documented for quality control. Photographs of the major site activities were taken and are included in Appendix A.

Samples for waste characterization were collected by URS personnel and analyzed by Lionville Laboratory, Inc. All wastes were properly disposed of at an approved disposal facility. Copies of

waste disposal manifests are included in Appendix B. Final signed copies of the waste manifests will be provided to ISP after receipt.

All daily activities were recorded on a daily contractor quality control report.

3.0 CONSTRUCTION ACTIVITIES

URS mobilized on-site on July 2, 2001 and the project was completed on November 29, 2001. Below is description of the different activities performed during the remedial work (refer to Figure 1-2 for the IRA cleanup areas):

3.1 Metallic mercury spills on the floor and collection trenches in buildings 230 and 240.

URS collected elemental Mercury (Hg) spread along the floor and the collection trenches of abandoned buildings # 230 and #240 (Figure 1-2). Continuous air monitoring for mercury, using a mercury vapor analyzer, was performed through out the day while cleanup work was underway. Large debris was visually inspected for free mercury, and then stored in a clean storage area and sampled for mercury, before being stored into roll-off boxes, awaiting offsite disposal.

Metallic mercury was pumped out using a mercury vacuum and then stored in special mercury containers. For hard to reach areas or for mercury stuck in floor cracks, Hg-absorb powder was sprinkled on the remaining small droplets of Hg. Absorbed Hg was cleaned-up using Hg-absorb sponges and was carefully placed into disposal containers. A hand-pump vacuum was also used to remove Hg from floor cracks and other hard to reach areas.

All waste and soil was segregated according to contamination level. There were 4 different types of waste: Free metallic mercury, Soil and debris containing more than 260 ppm Hg and free Hg liquid present, Soil and debris containing less than 260 ppm Hg and no free Hg liquid present, and Non-hazardous soil and debris.

Scoops, hand pumps, sponges, and other disposable items used for this task were containerized in 55-gallon drums. The containers were sealed and turned over to the disposal company for disposal.

Two surveys were conducted to make sure the floors and the collection trenches of both buildings are mercury free:

- Mercury vapor readings were taken at different locations through out both buildings on 2 different days and 2 different times. All readings were below the OSHA Mercury Standards (Appendix C).
- Mercury wipe samples were also collected and analyzed for Total Mercury. The highest Total Mercury result was 117 UG/KG, way below the NJ Soil Cleanup Criteria for Non-

residential Direct Contact Soil of 270 MG/KG. See Appendix C for sample locations and the associated analytical results.

3.2 Metallic mercury on a concrete floor slab outside building 230.

URS collected elemental Mercury spread along a concrete slab floor outside buildings # 230 (Figure 1-2). Continuous air monitoring for mercury, using a mercury vapor analyzer, was performed through out the day while cleanup work was underway.

Metallic mercury was pumped out using a mercury vacuum and then stored in special mercury containers. For mercury stuck in floor cracks, Hg-absorb powder was sprinkled on the remaining small droplets of Hg. Absorbed Hg was cleaned-up using Hg-absorb sponges and was carefully placed into disposal container.

Scoops, hand pumps, sponges, and other disposable items used for this task were containerized in 55-gallon drums. The containers were sealed and turned over to the disposal company for disposal.

3.3 Mercury contaminated soil in an open top 55-gallon drum, outside building 230.

URS collected Mercury contaminated soil found in an open top 55-gal drum outside building # 230 (Figure 1-2). Continuous air monitoring for mercury, using a mercury vapor analyzer, was performed through out the day while cleanup work was underway.

Metallic mercury was segregated from the soil to minimize its levels in the soil as much as possible. Metallic mercury was pumped out using a mercury vacuum and then stored in special mercury containers. The soil was sampled and stored in a 55-gallon drum for disposal.

Scoops, hand pumps, sponges, and other disposable items used for this task were containerized in 55-gallon drums. The containers were sealed and turned over to the disposal company for disposal.

3.4 25,000-gallon tank (saturator) adjacent to building 223.

The 25,000-gallon tank was located near the side of building 223 and accessible from the building through two catwalks. It has a conical shape bottom and was supported by four (4) legs. The elevation of its roof was approximately 50 ft high above the grade. The tank was corroded,

especially the supporting legs where several holes were present as a result of heavy corrosion and signs of deterioration. The tank contained a salt residue, and the residue was sampled for Full TCLP parameters (including Mercury) before proceeding with the demolition.

A man lift was used to access the overheads. An oxy-acetylene torch was used to cut the tank, and a sawzall was used to cut the pipes. The piping that were supported from the legs of the tank were cut and removed. The pipes were cut after the pipe supports (pipe columns) and before the hangers on the side of the building. This ensured that the remaining pipes are properly supported during and after the demolition activity. The 2 catwalks between the tank and the building were also cut and removed. The piping and platform on the roof were removed as well.

A 250-ton hydraulic crane was used to hold the top section of the tank, while riggers using man lifts prepared the tank for proper lifting. The 4 legs of the tank were then cut from the bottom, one at a time using torches. The tank was then brought down to lie flat on the side, on the floor underneath it. The roof was cut open, and the salt inside the tank was collected into 55-gallon steel drums and staged for disposal.

The tank was then cut into sections of manageable pieces. The rubber-lined steel was decontaminated, wipe sampled, and finally staged in roll off boxes for disposal.

3.5 Miscellaneous Waste

Three 55-gal Drums of Barium Chloride, one 55-gal Drum of Sodium Salt, one 55-gal and one 85-gal drums of Oil sludge, one Cu. Yd. box and three 85-gal drums of Asbestos Containing Material (Ceiling tiles), one 85-gal drum of Paint thinner, two 55-gal drum of Cement Filler, one Cu. Yd. box of cellulose powder, one 5 Gallon pail of Flammable Chemicals, and one 55-gal drum of antifreeze were also collected by URS from inside buildings 230 and 240, and disposed by the disposal company.

3.6 Waste Disposal

All waste characterization sampling, transportation and disposal were subcontracted to Envectra. All waste were properly disposed of at approved disposal facilities:

- Water collected onsite was disposed off at Dupont Chambers Works in Deepwater, NJ.

- Free metallic mercury, soil and debris containing more than 260 ppm Hg and free Hg liquid present, soil and debris containing less than 260 ppm Hg and no free Hg liquid present were disposed off at Advanced Environmental Recycling Corp in Allentown, PA.
- Mercury contaminated salt from the 25,000-gal tank were disposed off at Waste Management, Inc. Facility in Model City, NY.
- Three 55-gal Drums of Barium Chloride and one 5 Gallon pail of Flammable Chemicals were disposed at Ensco, Inc. in El Dorado, AR.
- All non-hazardous soil and debris, One 55-gal Drum of Sodium Salt, one Cu. Yd. box and three 85-gal drums of Asbestos Containing Material, one 55-gal drum of antifreeze, one Cu. Yd. box of cellulose powder, one 55-gal and one 85-gal drums of Oil sludge and two 55-gal drum of Cement Filler were disposed at Waste recovery Solution in Myerstown, PA.
- One 85-gal drum of Paint thinner Disposed at Marisol, Inc. in Middlesex, NJ.

Copies of waste manifests are included in Appendix B. Final copies of the manifests (signed) will be forwarded to ISP directly from the disposal facilities.

4.0 CHRONOLOGY OF EVENTS

A summary of activities associated with the interim removal action at the LCP Chemical Superfund Site is provided below:

July 2, 2001	Mobilization on-site, setup staging areas and decontamination areas.
July 9, 2001	Started mercury and other waste cleanup.
July 10, 2001	Tank demolition work preparation started.
August 7, 2001	Tank demolition completed. Mercury cleanup in progress.
September, 21 2001	Mercury cleanup and other waste work completed.
November 29, 2001	All drums were removed off-site; completion of Project.

SPECIAL HANDLING INSTRUCTIONS INCLUDING CONTAINER EXEMPTION NUMBER.

NJDEP 15939-02522

SHIPPER'S CERTIFICATION: This is to certify that the above named materials are properly classified, described, packaged, marked and labeled and are in proper condition for transportation according to the applicable regulations of the Department of Transportation, U.S. EPA and the State. The materials described above were consigned to the Transporter named. The consignee can and will accept the shipment and has a valid permit to do so if required. I certify that the foregoing is true and correct to the best of my knowledge.

Payment to the contractor for waste removal does not constitute payment to the carrier and if the contractor does not pay the carrier, the shipper is obligated to pay the agreed rate offered to the contractor.

SHIPPER'S CERTIFICATION: This is to certify that the above named materials are properly classified, described, packaged, marked and labeled and are in proper condition for transportation according to the applicable regulations of the Department of Transportation, U.S. EPA and the State. The materials described above were consigned to the Transporter named. The consignee can and will accept the shipment and has a valid permit to do so if required. I certify that the foregoing is true and correct to the best of my knowledge.

Payment to the contractor for waste removal does not constitute payment to the carrier and if the contractor does not pay the carrier, the shipper is obligated to pay the agreed rate offered to the contractor.

SPECIAL HANDLING INSTRUCTIONS INCLUDING CONTAINER EXEMPTION NUMBER.

SHIPPER'S CERTIFICATION: This is to certify that the above named materials are properly classified, described, packaged, marked and labeled and are in proper condition for transportation according to the applicable regulations of the Department of Transportation, U.S. EPA and the State. The materials described above were consigned to the Transporter named. The consignee can and will accept the shipment and has a valid permit to do so if required. I certify that the foregoing is true and correct to the best of my knowledge.

Payment to the contractor for waste removal does not constitute payment to the carrier and if the contractor does not pay the carrier, the shipper is obligated to pay the agreed rate offered to the contractor.

PLEASE PRINT NAME/TITLE	SHIPPER'S SIGNATURE X <i>[Signature]</i>	DATE LOADED 06/2
I HAVE READ THE ABOVE AND UNDERSTAND AND AGREE TO ALL OF ITS CONTENT.		SEAL NO.
